Planning and Accountability

Texas Higher Education Coordinating Board

A.W. "Whit" Riter III, CHAIR Tyler Fred W. Heldenfels IV, VICE-CHAIR Austin Elaine Mendoza, SECRETARY OF THE BOARD San Antonio Charles E. "Trey" Lewis III, STUDENT MEMBER OF THE BOARD Houston Laurie Bricker Houston Joe B. Hinton Crawford Brenda Pejovich Dallas Lyn Bracewell Phillips Bastrop Robert W. Shepard Harlingen Robert V. Wingo El Paso

Raymund A. Paredes, COMMISSIONER OF HIGHER EDUCATION

Mission of the Coordinating Board

The Texas Higher Education Coordinating Board's mission is to work with the Legislature, Governor, governing boards, higher education institutions, and other entities to help Texas meet the goals of the state's higher education plan, *Closing the Gaps by 2015*, and thereby provide the people of Texas the widest access to higher education of the highest quality in the most efficient manner.

Philosophy of the Coordinating Board

The Texas Higher Education Coordinating Board will promote access to quality higher education across the state with the conviction that access without quality is mediocrity and that quality without access is unacceptable. The Board will be open, ethical, responsive, and committed to public service. The Board will approach its work with a sense of purpose and responsibility to the people of Texas and is committed to the best use of public monies. The Coordinating Board will engage in actions that add value to Texas and to higher education. The agency will avoid efforts that do not add value or that are duplicated by other entities.

The Texas Higher Education Coordinating Board does not discriminate on the basis of race, color, national origin, gender, religion, age, or disability in employment or the provision of services.

Participation Forecast 2009-2020 **Foreword**

Biennially since 1979, the Texas Higher Education Coordinating Board has calculated enrollment trends and expectations which are fundamental to higher education planning. In times of changing demographics, these forecasts become even more critical as they inform the higher education community and the state of anticipated enrollments if current patterns continue. The Participation Forecast 2009-2020 is the 16th installment in the Coordinating Board's series on this important topic.

Participation Forecast

The methodology used to produce the participation forecast has remained relatively unchanged since 1979. It applies past enrollments to population projections by geographic location, age, and race/ethnicity. Possible future differences in the rate of high school graduation, increases in higher education participation by racial/ethnic groups, or changes in local policies are not incorporated into this methodology. For that reason, the forecast is conservative; it projects future enrollments if current trends continue.

The participation goal of Coordinating Board's Closing the Gaps by 2015 higher education plan, in contrast to the Participation Forecast, is based on what the state wants enrollments to be for comparability with other large population states and for equal participation rates for students of all ethnic/racial groups.

The Texas State Data Center's population projections released in 2004 and 2006 indicated that the Texas

Public Colleges' and Universities' **Participation Forecast**

Figure 1

population, as a whole, was anticipated to grow more rapidly than previously estimated. As a result, the Coordinating Board updated its Closing the Gaps (CTG) participation goal and targets in 2005. The 2015 participation goal was raised from enrolling 500,000 more students than in fall 2000 to enrolling 630,000 more students. Most of this increase is the result of growth in Texas' Hispanic population, which is projected to grow even more rapidly than previously thought. Unfortunately, according to this forecast, Hispanic enrollments in higher education are not projected to increase proportionally.

To urge higher education institutions to strive to help the state meet the *CTG 2015* participation goal, the Coordinating Board asked each public institution to submit ambitious institutional targets for participation (called Institutional *Closing the Gaps* Targets).

Figure 1 demonstrates the difference between the enrollment forecast projected in this document, the Coordinating Board's *CTG* goals, and the Institutional *Closing the Gaps* Targets. The comparison indicates that Texas is not yet on track to meet its *Closing the Gaps* goal. This forecast estimates Texas institutions will enroll 1.34 million students in 2015 (or an additional 368,000 students over 2000). If true, the state would be about 252,000 students short of the 2015 *Closing the Gaps* goal of 1.6 million students. The Coordinating Board has stated that if any group does not reach its goal, the state as a whole has not achieved its goal.

To begin the process of planning and preparing for the years beyond 2015, this report estimates enrollments through 2020. The *Closing the Gaps* plan, on the other hand, only states participation expectations through 2015.

A Note of Caution

The following points should be remembered when reviewing this forecast:

- The Texas State Data Center (TSDC) periodically updates its population projections and reconsiders the migration scenario to use for long-term projections. The 2004 Participation Forecast used the 2000-2002 net migration pattern as a basis for its enrollment projections. The 2006 Forecast used net migration rates that were one-half of those experienced during the 1990-2000 timeframe, as suggested by TSDC. At the time this report was prepared, TSDC had not issued revised 2008 population projections. On the recommendation of TSDC, this forecast uses the 2000-2004 migration scenario developed in 2006.
- The total population projected for 2015 in the prior participation forecast was 26,156,715; the total 2015 population used in this report is 27,581,188, or 5.4 percent higher than the previous total. For the college-going 15-34 age group, the difference is 8.3 percent higher. Because the population forecast is an integral part of the projection methodology, the higher projected population has a direct effect on anticipated enrollments.
- The other primary factor influencing projected participation is the recent enrollment trend. Enrollment growth at public and independent colleges and universities from 2000 to 2002 was 11.9 percent, whereas the enrollment growth for the five-year period from 2003 to 2007, which services as the basis for this forecast, was only 7 percent. This much lower rate of growth is reflected in the projected enrollments. Despite the rather flat enrollment growth, the higher population projections result in 2015 enrollments that are slightly higher than those forecast two years ago.
- As indicated, the forecast model is influenced strongly by historical in-state participation patterns at each institution and projected population changes by

county. This forecast may not accurately reflect future participation if institutions recruit students from different areas or of different ethnic groups, as is the goal of *Closing the Gaps*. Institutional decisions to change or impose enrollment limitations would also reduce the forecast's accuracy.

Economics affect participation. Participation has usually expanded in times of
increasing unemployment, in part because students want to prepare for better
jobs. Also, the availability of financial aid influences students' decisions to enter
or return to college. Tuition at most institutions have increased recently, and
enrollment growth plateaued, perhaps in response to higher costs. The recent
credit crunch is viewed as affecting the availability of non-governmental
educational loans, which may also affect enrollments.

Participation Forecast 2009-2020

Participation in Texas' Colleges and Universities to 2020

About 1,299,000 students enrolled in Texas' public and independent colleges and universities in fall 2008, representing a 3.5 percent increase over fall 2007 enrollment. This growth rate was an improvement over the nearly static fall 2004 to fall 2005 level of 0.9 percent, but considerably less than the annual growth rate of over 5 percent experienced in fall 2000 and fall 2001. The recent decline in enrollment growths affects the participation forecast because the model relies on recent trends to project future levels. This forecast is also based on population projections from the Texas State Data Center, which suggested use of a migration scenario that anticipates faster growth than the scenario used in 2006.

Together these factors mean that enrollments projected in this report are higher than the 2006 estimate. For 2009 to 2010, the forecast anticipates a growth rate of 9.1 percent, or about 11,500 additional students. In the two following five-year increments, a further reduction in growth is projected. From 2010 to 2015, enrollment is estimated to increase by 5 percent (or an additional 64,000 students), and by 5.6 percent from 2015 to 2020 (or 74,000 more students). If current trends continue, Texas public and independent colleges and universities are expected to enroll over 1.34 million students by 2015, compared to a *Closing the Gaps* goal of 1.6 million. (See Tables 1 and 2.)

For public universities, fall 2008 participation totaled 509,000 students. This figure represents an increase of nearly 12,000 more students than enrolled in 2007, or an annual growth rate of 2.4 percent. The fall 2000 to fall 2005 five-year participation increase totaled 17 percent. From 2005 to 2010, participation is forecasted to increase more slowly at 7.2 percent to about 520,000 students. For the next five-year period, from 2010 to 2015, the rate of enrollment growth is projected to decline again to 5.7 percent and then to 4.2 percent from 2015 to 2020. Texas public universities are expected to enroll 550,000 students by 2015 and 573,000 in 2020.

Texas public two-year colleges have generally grown more rapidly than universities since the mid-1960s and are expected to continue to outpace universities' growth. Public colleges' preliminary participation in fall 2008 totaled 617,600 students. This represents an increase of about 30,000 students over fall 2007 participation, or a 5.2 percent annual growth rate. This Participation Forecast estimates two-year institutions will grow by 12.3 percent for the five-year period from 2005 to 2010, to about 636,000 students. For the subsequent five-year period—from 2010 to 2015—colleges' growth is expected to slow to 5.1 percent, just as projected for universities. Unlike universities, colleges' pace of growth is anticipated to rebound to 7.4 percent from 2015 to 2020. As a result of these increases, Texas public two-year colleges are expected to enroll more than 668,000 students by 2015, and 718,000 by 2020.

No enrollment projections are made for health-related institutions because their enrollments are more closely tied to state policies than to state population growth.

Figure 3
Participation Forecast Development Process
Texas Higher Education Coordinating Board

Texas Public College and University Participation Forecast Methodology

Participation forecasts were developed for each public college and university. Aggregate participation forecasts for the 35 public universities, the 50 public community college districts, four public technical colleges, and three state colleges were determined by examining institutional fall headcount enrollments. The forecast methodology used five years of age- and racial/ethnic-specific historical public higher education participation for each Texas county. These participation data were combined with age- and racial/ethnic-specific population projection data. (See Figure 3.) The individual forecasts were produced using multiple regression analysis techniques and, in a few instances, were modified using documented adjustment factors submitted by individual institutions. A general description of the forecast steps follows:

- For in-state student participation, five-years (2003-2007) of participation by students from each county was subdivided into age groups and racial/ethnic groups (Hispanic, African American, white, and other) at each institution. These data were matched with county population estimates to develop three alternative, age-specific, in-state participation rates for each of the four racial/ethnic groups in each of the 254 counties. The three alternative rates were applied to 2008 population estimates to derive three alternative in-state fall 2008 participation levels for each institution.
- Each institution's three alternative forecasts were compared with its certified (if available) or preliminary in-state participation for fall 2008 and with past participation trends. The forecast rate chosen (called "best fit") was that closest to the actual or preliminary enrollment. The "best fit" participation was adjusted using a multiplier, if necessary, to calculate a rate within +/- 3 percent of the instate headcount.
- The participation rate alternative, and possibly an adjustment multiplier, that
 produced the "best fit" for each institution were applied to projected population
 by county/age/ethnic data for the years 2008, 2008, 2009, 2010, 2015, and 2020
 to obtain a forecast of in-state participation for each institution. The resulting
 forecast was based on that fixed participation rate for the entire forecast period.
- Non-Texas resident participation, which includes both out-of-state and foreign students, was determined by examining the five-year record (2003-2007) and computing a ratio of nonresident to in-state students for each institution. These historical data were compared with the certified (if available) or preliminary fall 2008 institutional reports of nonresidential enrollments. The "best fit" ratio was used to compute nonresident participation.
- The calculated in-state and nonresident participation for each institution was combined to obtain a draft total participation forecast for the years 2009, 2010, 2015, and 2020.
- An adjustment was made to the draft total participation for some institutions based on known enrollment management policies. Also, the draft forecast was

sent to each institution for review and response prior to final publication. Based on conditions unique to specific institutions which could not be accounted for in the methodology, adjustments may have been made. The accuracy of the past forecasts was also taken into consideration when evaluating institutional adjustment suggestions.

<u>Historical Participation</u>

Tables 8, 9, 10, and 11 provide recent participation data. Data in these tables present in-state and nonresident enrollments at all public universities and public two-year colleges statewide by age and racial/ethnic group. This same participation information is available at the county level for each of these public institutions. Between 2000 and 2008, enrollment increased at public universities by 94,500 students (22.8 percent). At public community and technical colleges, enrollment increases totaled 169,600 students, or 37.9 percent.

At both types of institutions, increases have been greater for Hispanics than for African American, white and other students. Nevertheless, in 2008, white students made up 50.3 percent of the enrollment at public universities and 45.3 percent at public two-year colleges. Texas residents comprised 90.3 percent of all students at public universities and 95.2 percent at public two-year colleges.

<u>Texas Population Projections</u>

The participation forecast used the Texas State Data Center (TSDC) population projections, completed in fall 2006, which are based on a cohort-component technique. Projections from a base population—from the 2000 federal census—were made individually for people with common characteristics (in this case age, gender, and race/ethnicity) for fertility, mortality, and migration. The 2006 projections were used because updated 2008 projections were not available at the time this report was prepared.

Age, gender, and race/ethnicity-specific fertility rates were computed using recorded births and place of residence of the mother. This information was obtained from the Texas Department of Health. Data on women by age (10 to 49) and race/ethnicity were obtained from the 2000 federal census of the population.

Life survival rates for whites, Hispanics, African Americans, and others were computed using Texas Department of Health mortality data. Migration rates were derived using net migration estimates by age, gender and race/ethnicity in Texas for 1990-2000 and 2000-2005. Using this as a base, migration rates were computed for white, Hispanic, African American, and other populations for the appropriate timeframe. To deal with the migration component, which is the most difficult to project, alternative scenarios of growth were developed. All scenarios used the same set of mortality and fertility rates but differed in the assumptions relative to net migration. Population projections used in this Participation Forecast assumed net migration rates that like those experienced from 2000 to 2004. The prior Forecast also used the 2006 projections, but at that time TSDC suggested using the migration scenario that was based on one-half of that experienced during the 1990-2000 timeframe. The 2000-2004 migration scenario produces a population projection for 2015 that is 5.4 percent higher than the projection used in the previous report.

Statewide population projections show several significant features of the future Texas population (see Table 12):

- Between 2008 and 2020, the total population will grow at an average annual rate of about 2.1 percent.
- Hispanics will continue to be the fastest growing racial/ethnic group. In 2008,
 Hispanics comprised about 37.7 percent of the population; by 2020, this share
 will reach 46 percent. The African American share will drop from 11.2 percent to
 10.3 percent, while the white's percentage will decline from 46.8 percent in 2008
 to approximately 37.9 percent in 2020.
- The 35 and older age group will see a greater increase in numbers than the younger age group, from 47.7 percent of the population in 2008 to 50.8 percent of the population in 2020.
- The 15-to-34 year-old population, which makes up 30.2 percent of the total in 2008, will drop to 28.6 percent in 2020. The ethnic make-up of this group will change from 44.8 percent Hispanic in 2008 to 51.7 percent in 2020.

Although Table 12 indicates the populations at the statewide level only, similar data are available for each of the 254 Texas counties.

Participation Rate Alternatives

The five-year (2003-2007) in-state participation database and the population database were used to obtain enrollment rates for each of the four racial/ethnic groups (white, Hispanic, African American, and other) by county and age groups for each institution. Three alternative rates were calculated as follows:

2007 Racial/Ethnic Rate: The total number of students in a specific age/racial/ethnic group from each county attending each institution in 2007 divided by the total number of people of the specific age/racial/ethnic group living in the county.

Trend Racial/Ethnic Rates: Using five years of observed participation data, two straight-line arithmetic trend participation levels were developed by age/racial/ethnic groups and county for each institution. These were: (1) the 2003-2007 five-year trend extended to 2008 and (2) the five-year trend extended to 2009. The equation $Y_c = a + bx$ was used, where:

<u>a</u> is the mean participation over the five-year period;

 \underline{b} is the deviation from the center year multiplied by the observed participation, summed and divided by the sum of the squares of the deviations, and

x = +2 for the five-year trend extended to 2008, +3 for the five-year trend extended to 2009.

The predicted trend participation (Y_c) for each age/racial/ethnic group was divided by the total number of people of the specific age/racial/ethnic group living in the county for the corresponding year.

Each of these three alternative participation rates contained attendance rates for each of the 254 counties at each institution by six age groups (15 to 19, 20 to 24, 25 to 29, 30 to 34, 35 to 39, and 40 and above) for four racial/ethnic groups (white, Hispanic, African American, and other).

In-State Participation Forecast Alternatives for 2008

Computed participation rates for each county were multiplied by the corresponding age/racial/ethnic/county population projections for 2008. This produced three alternative forecasts of students by age/racial/ethnicity from each county expected to attend each institution in 2008. Age groups were then summed to obtain statewide forecasts of white, Hispanic, African American, and other students at each institution in 2008. Total in-state participation for each of the three alternatives was obtained by summing the racial/ethnic participation.

The three alternative in-state participation levels for each institution are shown in Tables 13 and 14.

In-State Participation "Best Fit" Rate Selection

The next step was to select for each institution one of the three in-state participation rate alternatives. The following criteria were used:

- 1. The participation forecast produced for 2008, when compared with the certified/preliminary 2008 enrollment and the five-year trend, must be the one that most closely follows the general trend of the historical participation pattern. If the historical participation pattern is increasing, the selected alternative should show an increase. If the pattern is decreasing, the selected alternative should show a decrease. If the pattern is stable, the nearest alternative to the certified/preliminary 2008 participation is selected.
- 2. If the historical pattern is increasing or decreasing, the 2008 participation produced by the selected alternative must fall within 3 percent of the certified/preliminary 2008 participation. If the historical pattern is stable, the 2008 participation produced by the selected alternative must fall within plus or minus 1 percent of the certified/preliminary 2008 participation. If necessary, a multiplier can be computed to satisfy this condition.

The selected "best fit" alternative (see Tables 15 and 16) determined which rate to use for each institution in forecasting 2008, 2009, 2010,2011, 2015, and 2020 participation. The multiplier, if needed, was used to augment the forecast for each year.

In-State Participation Forecast

The selected "best fit" participation rate alternative for each institution and for each racial/ethnic group was applied to the corresponding age/racial/ethnic group projected population for 2008, 2009, 2010, 2015, and 2020 by county. Age groups were summed for each year, by racial/ethnic group, to provide county total participation for white, Hispanic, African American, and other students at each institution for each of the forecast years. County participation levels were summed by institution and year to provide total white, Hispanic, African American, and other student forecasts for each institution. Finally, the racial/ethnic participation levels for each institution were summed to produce total in-state participation. Multipliers are applied to the in-state participation to meet the criteria described above, if needed.

Nonresident Participation Ratios

In fall 2008, the percent of out-of-state students varied from 1 percent to 27 percent at public universities and from less than 1 percent to 7 percent at public two-year colleges. Therefore, it was necessary to determine a means of accounting for expected nonresident students in each institution. This was done by selecting a representative "nonresidential factor" for each institution, based on historical data from 2003 to 2007. The ratios of nonresident to in-state participation were compared with the preliminary 2008 nonresident to in-state ratios for each institution. The selected ratio became a factor used in the forecast process to determine nonresident participation forecasts for each institution. (See Tables 17 and 18.)

<u>Draft Total Participation Forecast and Adjustments</u>

At this point in the forecast process, total in-state participation forecasts for 2008, 2009, 2010, 2015, and 2020, plus a nonresident factor, were available for each institution. Multiplying the selected nonresident factor by the in-state participation produced nonresident participation by institution and year. Nonresident and in-state participation levels were added to produce a base total participation forecast for each institution for 2008, 2009, 2010, 2015, and 2020. The selected alternative used to forecast in-state participation and the factor which produced nonresident participation were controlled by quantifiable historical participation patterns and expected demographic changes. Consequently, the participation forecasts which they produced did not take into account future changes in the status of institutions or internal, non-quantifiable conditions which could influence participation at a specific college or university. These were addressed, to some degree, by making adjustments to institutional draft forecasts as appropriate:

- Some public universities have, or intend to establish, policies that will cap enrollment at specific levels. For these institutions, the model might possibly forecast an excess number of students. In cases where this occurred, the excess was subtracted and redistributed to other institutions.
- Other institutions have responded with limitations on capacity, new programs, or other institution-specific items for adjustment. Table 19 itemizes the institutional adjustments used to modify the CB forecasts.

Table 19
Adjustments to Draft Participation Forecasts
Based on Local Conditions

	Institutional Adjustments				
	2009	2010	2011	2015	2020
Texas A&M University-Corpus Christi	206	502	712	1,900	2,925

Participation Forecast – Texas Independent Senior Colleges and Universities

Forecasts of total participation for the independent senior colleges and universities were calculated by first determining the historical correlation between independent and public university total participation levels for the period 2003 to 2007 as follows:

Table 20 Participation at Public and Independent Universities

Year	Public Universities (X)	Independent Senior Institutions (Y)
2003	455,719	114,082
2004	472,818	113,497
2005	482,124	115,155
2006	491,140	115,684
2007	497,195	116,278

These observed data were used to develop the following regression equation:

$$Y_i = \overline{Y} + \frac{\sum xY}{\sum x^2} (X_i - \overline{X})$$

or

Where:

 γ_i is the predicted value of participation at independent colleges and universities

 \boldsymbol{X}_i is the predicted value of participation at public universities

 \overline{Y} is the mean of the Y observations (independent senior institutions)

 \overline{Y} is the mean of the X observations (public universities)

x is the deviation of X observations from the mean

After forecasts for public universities were made, the values as shown below were substituted for X_i . The regression equation was used to predict the participation for independent colleges and universities. An additional multiplier was added to account for past error. The following forecast was predicted:

Table 21 Independent Senior College and University Forecast

Year	Public University Forecast	Independent Senior College and University Forecast
2009	514,582	118,035
2010	520,130	118,461
2011	524,299	118,827
2015	549,903	120,446
2020	572,876	122,163
